

~~RESTRICTED~~

5 August 1948

MEMORANDUM FOR: THE DEPARTMENT OF THE ARMY
GENERAL STAFF, INTELLIGENCE DIVISION
WASHINGTON 25, D.C.

SUBJECT : FBIS Teletype Procedures

REFERENCE : CSGID letter dated 9 July 1948.

1. This Agency is grateful for the report listing the incorrect teletype procedures used by our tributary station USPSE. Our operating personnel have been informed of the correct procedures insofar as the spacing between elements and spacing between lines in the message heading is concerned. Of the other procedures listed, this Agency would prefer that both the routing indicator and clear text designation for the originator be used even though both are synonymous. This will assure proper delivery in the event of mutilations in the routing indicators or use of an incorrect routing indicator by originating stations. This Agency would also prefer to continue using punctuation marks in the text of the message as well as the three spaces between the internal address and message proper. These variations from the JANAP 127 procedure assist our editorial staff in processing the messages to a great extent.

2. If these variations in the JANAP 127 procedure will in any way hinder the passing of traffic over the ACAH network or, if for any other reason it is desired that these variations be eliminated from FBIS traffic, please advise this Agency further. The assistance given by the Army in handling CIA traffic is greatly appreciated and any changes in the procedure desired by the Army to help in the handling of this traffic on the ACAH network will be made if possible.

Lt. Colonel G. S. C.
